BADGE APPS™

IP, App and Internet Investigations for Police
Hosted by Buckeye PD, Arizona
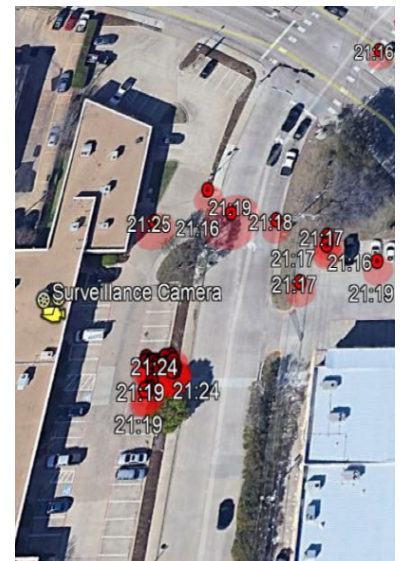

Date: Monday, January 22, 2024
Time: 0800hrs – 1700hrs (MT)

What does an online threat of school violence, a classified ad in a fraud investigation or a VOIP (Voice-Over-IP) phone number used to commit an offense all have in common? IP (Internet Protocol) addresses can all be used to investigate and identify your suspect in those cases.

It doesn't matter what type of offense you investigate; at some point you will need to understand how IP addresses are used. We will take an interactive look at walking through investigations from start to finish and understanding each step of the investigative process to find a suspect.

Who is this class for? Law enforcement employees to include detectives, crime analysts and sworn officers can benefit from this training. Example offenses include cold case murders, robbery, burglary and fraud offenses.

What skills do I need? Basic Microsoft Office types of skills in Windows

Instructor Bio: Aaron Benzick is a police detective working for a law enforcement agency in the suburbs of north Texas for over 20 years. As the founder of Badge Apps, Aaron has used his strong technical background to create unique software to solve law enforcement problems. This combination of skills has led to the successful identification and apprehension of numerous suspects in complex criminal investigations and missing person cases.
